Anko in Donation

Introducing Donation

A quick look at a new
Android App and some
Anko Examples

Agenda

- ❑ Background
- ❑ Extension Functions
- ❑ The Anko Library Components
 - Anko Commons
 - Anko Layouts
 - Anko SQLite
 - Anko Coroutines
- ❑ Anko in our Case Study (Donation)

Agenda

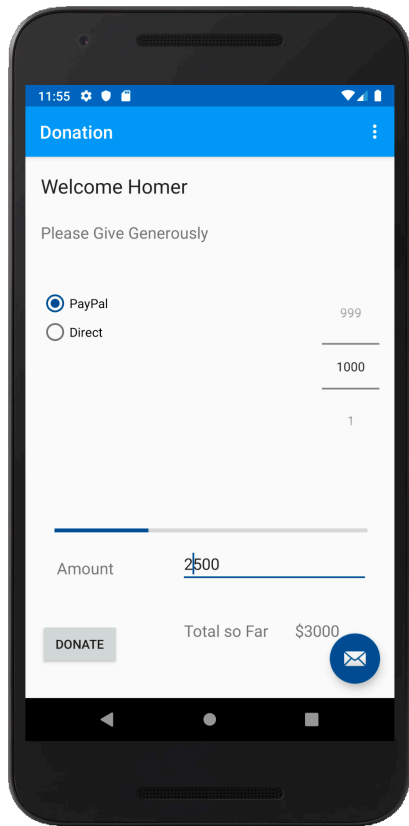

- ❑ Background
- ❑ Extension Functions
- ❑ The Anko Library Components
 - Anko Commons
 - Anko Layouts
 - Anko SQLite
 - Anko Coroutines
- ❑ **Anko in our Case Study (Donation)**

Donation

Let's get Homer Elected!

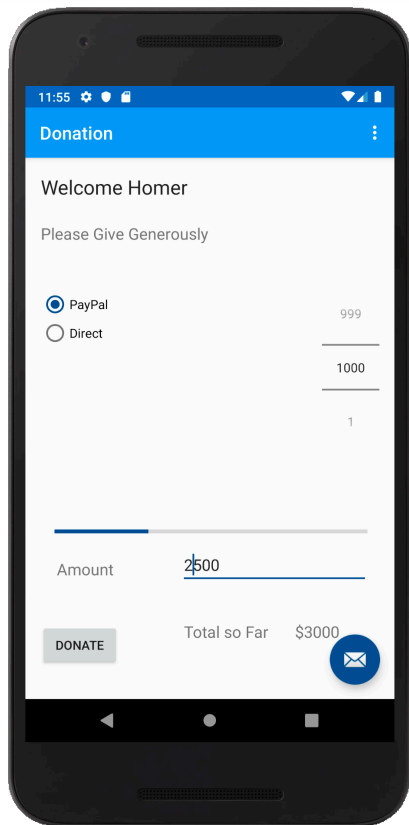

Introduction – What is Donation?

- ❑ An Android App to keep track of donations made to 'Homers Presidential Campaign'.
- ❑ App Features
 - Accept donation via number picker or typed amount
 - Keep a running total of donations
 - Display report on donation amounts and types
 - Display running total on progress bar

Donate Screen

□ This is the main (launch) screen

□ Single Activity

- Welcome message
- Multiple Widgets
 - ◆ NumberPicker
 - ◆ RadioButtons
 - ◆ Button
 - ◆ ProgressBar
 - ◆ EditText etc.

Report Screen

❑ Single Activity:

❑ 1 TextView

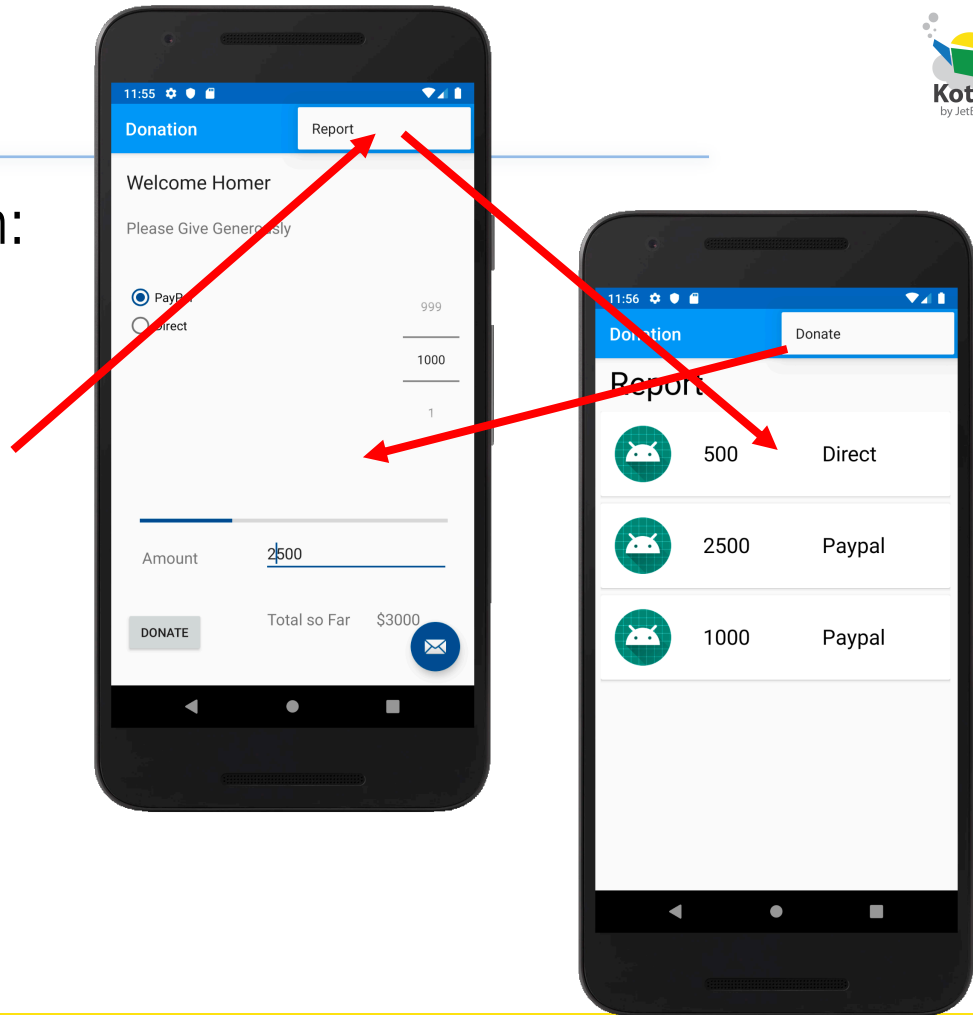

❑ 1 RecyclerView

- amount donated
- payment type
- placeholder for photo

Action Bar / Menus

❑ App has an action bar with:

- Menu options to navigate between activities.
- Overflow option can display other Menu Options

DonationAnko

intents, dialogs, logging;

Anko Dependencies

```
buildscript {  
    ext.kotlin_version = '1.3.50'  
    ext.anko_version = '0.10.8'  
    repositories {  
        google()  
        jcenter()  
    }  
}
```

// Anko Commons

```
implementation "org.jetbrains.anko:anko-commons:$anko_version"  
implementation "org.jetbrains.anko:anko-design:$anko_version"
```

// Anko Layouts

```
implementation "org.jetbrains.anko:anko-sdk25:$anko_version" // sdk15, sdk19,  
implementation "org.jetbrains.anko:anko-appcompat-v7:$anko_version"
```

// Coroutine listeners for Anko Layouts

```
implementation "org.jetbrains.anko:anko-sdk25-coroutines:$anko_version"  
implementation "org.jetbrains.anko:anko-appcompat-v7-coroutines:$anko_version"
```

// Anko SQLite

```
implementation "org.jetbrains.anko:anko-sqlite:$anko_version"
```

Anko Usage - Toast

❑ Before Anko

```
if(totalDonated >= progressBar.max)  
    Toast.makeText(this,  
        "Donate Amount Exceeded!",  
        Toast.LENGTH_LONG).show()
```

❑ After

```
if(totalDonated >= progressBar.max)  
    toast("Donation Amount Exceeded!")
```

Anko Usage - Snackbar

❑ Before Anko

```
fab.setOnClickListener { view ->
    Snackbar.make(view, "Replace with your own action",
        Snackbar.LENGTH_LONG)
        .setAction("Action", null).show()
}
```

❑ After

```
fab.setOnClickListener { view ->
    view.snackbar("Replace with your own action", "Action") { null }
}
```

Anko Usage - Intents

❑ Before Anko

```
R.id.action_report -> {  
    startActivity(Intent(this, Report::class.java))  
    true  
}
```

❑ After

```
R.id.action_report -> {  
    startActivity<Report>()  
    true  
}
```

Anko Usage – Alerts (Before)

```
fun alertDemo()
{
    val builder = AlertDialog.Builder(this)
    builder.setTitle("Androidly Alert")
    builder.setMessage("This is a message")

    builder.setPositiveButton(android.R.string.yes) { dialog, which ->
        Toast.makeText(applicationContext,
            android.R.string.yes, Toast.LENGTH_SHORT).show()
    }

    builder.setNegativeButton(android.R.string.no) { dialog, which ->
        Toast.makeText(applicationContext,
            android.R.string.no, Toast.LENGTH_SHORT).show()
    }

    builder.setNeutralButton("Maybe") { dialog, which ->
        Toast.makeText(applicationContext,
            "Maybe", Toast.LENGTH_SHORT).show()
    }
    builder.show()
}
```

Anko Usage – Alerts (After)

```
fun alertAnkoDemo()  
{  
    alert("This is a message", "Androidly Alert") {  
        yesButton { toast(android.R.string.yes) }  
        noButton { toast(android.R.string.no) }  
        neutralPressed("Maybe") { toast("Maybe") }  
    }.show()  
}
```
